

MACHINE LEARNING

Q1 to Q11 have only one correct answer. Choose the correct option to answer your question.

1	 Movie Recommendation systems are an example of: i) Classification ii) Clustering iii) Regression Options: a) 2 Only b) 1 and 2 c) 1 and 3 d) 2 and 3
2	2. Sentiment Analysis is an example of: i) Regression ii) Classification iii) Clustering iv) Reinforcement Options: a) 1 Only b) 1 and 2 c) 1 and 3 d) 1, 2 and 4
3	3. Can decision trees be used for performing clustering?a) Trueb) False
4	 Which of the following is the most appropriate strategy for data cleaning before performing clustering analysis, given less than desirable number of data points: i) Capping and flooring of variables ii) Removal of outliers
5	 What is the minimum no. of variables/ features required to perform clustering? a) 0 b) 1 c) 2 d) 3
6	5. For two runs of K-Mean clustering is it expected to get same clustering results?a) Yesb) No
7	 7. Is it possible that Assignment of observations to clusters does not change between successive iterations in K-Means? a) Yes b) No c) Can't say d) None of these

MACHINE LEARNING

- 8. Which of the following can act as possible termination conditions in K-Means?
 - i) For a fixed number of iterations.
 - ii) Assignment of observations to clusters does not change between iterations. Except for cases witha bad local minimum.
 - iii) Centroids do not change between successive iterations.
 - iv) Terminate when RSS falls below a threshold. Options:
 - a) 1, 3 and 4
 - b) 1, 2 and 3
 - c) 1, 2 and 4
 - d) All of the above
- 9. Which of the following algorithms is most sensitive to outliers?
 - a) K-means clustering algorithm
 - b) K-medians clustering algorithm
 - c) K-modes clustering algorithm
 - d) K-medoids clustering algorithm
- 10. How can Clustering (Unsupervised Learning) be used to improve the accuracy of Linear Regression model (Supervised Learning):
 - i) Creating different models for different cluster groups.
 - ii) Creating an input feature for cluster ids as an ordinal variable.
 - iii) Creating an input feature for cluster centroids as a continuous variable.
 - iv) Creating an input feature for cluster size as a continuous variable. Options:
 - a) 1 only
 - b) 2 only
 - c) 3 and 4
 - d) All of the above
- 11. What could be the possible reason(s) for producing two different dendrograms using agglomerative clustering algorithms for the same dataset?
 - a) Proximity function used
 - b) of data points used
 - c) of variables used
 - d) All of the above

Q12 to Q14 are subjective answers type questions, Answers them in their own words briefly

- 12. Is K sensitive to outliers?
- 13. Why is K means better?
- 14. Is K means a deterministic algorithm?
